

ARIVAZHAGAN S

Senior Java Product Software Engineer | Full Stack | AI Engineer | MCP, RAG & Agentic AI Workflow Architect
+91-7010009295 | arivazhaganazhagan98@gmail.com | [Linkedin](#) | [Portfolio](#) | Chennai, Tamil Nadu, India

PROFESSIONAL SUMMARY

Senior Java Full Stack Engineer with 5+ years delivering enterprise microservices, RESTful APIs, and full-stack applications for global banking and fleet telematics clients — Citi Bank, UBS, Zurich, Chubb and PENSKE. Applied AI: architecting production-grade Agentic AI systems, Model Context Protocol (MCP) servers, and Retrieval-Augmented Generation (RAG) pipelines. Core expertise in Java, Spring Boot, Microservices, REST APIs, LLM integration, GitHub Copilot, Agentic AI, MCP, RAG, Azure, Kubernetes, Docker, Kafka, AWS & SQL.

PROFESSIONAL EXPERIENCE

WOLTERS KLUWER ELM SOLUTIONS | October 2022 – Present | Chennai, Tamil Nadu, India

Designation: Senior Product Software Engineer (Full-time, Direct Payroll)

Client: Citi Bank, Zurich, UBS, Chubb

Role & Domain: Java Full Stack & Groovy Developer (Enterprise Legal Management, Regulatory & Finance)

Key Responsibilities:

- Architected and delivered end-to-end customizations and integrations for flagship global banking clients across legal, regulatory, and finance domains
- Developed and maintained scalable Java Spring Boot microservices, contributing to core product enhancements and client-specific enterprise implementations
- Engineered P2P system integrations using Java and Groovy, enabling seamless cross-platform data exchange across client environments
- Drove full-cycle delivery — from requirements analysis and solution design through implementation, testing, and production deployment
- Executed thorough functional, UAT and post-deployment validation across all client configurations

Cloud & DevOps: Managed Jenkins CI/CD pipelines; monitored Azure-hosted instances for uptime, performance & health; maintained Docker images, performed log analysis & oversaw deployment pipeline configurations

Frontend: Delivered client-specific UI customizations using JavaScript, HTML5, and CSS3

Database: Developed SQL scripts, performed data validation & supported DB operations across MS-SQL Server

Git workflow: Branching, conflict resolution, PRs, code reviews via Git CLI, GitHub Desktop and Bitbucket

AI: Built custom AI Agents, MCP Servers, Agentic AI and workflow automations on top of the product

Others: Hands-on with JIRA and Confluence for Agile project tracking and documentation

CAPGEMINI TECHNOLOGY SERVICES | October 2020 – October 2022 | Chennai, Tamil Nadu, India

Designation: Senior Analyst – Custom Software Developer (Full-time, Direct Payroll)

Client: PENSKE Connected Fleet, Germany

Role & Domain: Java Full Stack Developer (Customer, Unit & Device Management, Vehicle Location Services)

Key Responsibilities:

- Designed and developed Java RESTful APIs from the ground up using Spring Boot microservices architecture, forming the backbone of PENSKE's fleet management platform for the German market
- Hands-on with Kafka messaging channels to ingest and process continuous real-time data streams from connected fleet devices across the Penske network
- Achieved 95% code coverage by authoring comprehensive unit and integration test suites with JUnit 4, Mockito, and PowerMockito — significantly raising the code quality bar across all services
- Produced complete Swagger API documentation for every service endpoint; performed thorough manual API testing and regression validation using Postman
- Maintained application and instance health by monitoring configurations, performing log analysis, and resolving stability issues proactively

Cloud and DevOps: Manual & Automated deployments to PCF via CLI and Bamboo CI/CD pipelines

Frontend: Angular frontend development, bug fixing, testing & deployment support

Database: SQL scripting from scratch and all database operations (MySQL)

Git workflow: Branching, conflict resolution, PRs, code reviews via Git CLI, GitHub Desktop and Bitbucket

Others: Hands-on with JIRA, Confluence, and Bamboo for Agile delivery

KEY PROJECTS

WOLTERS KLUWER ELM SOLUTIONS

FINANCIAL

- **Reserves & Settlements Management System:** Architected and delivered a core financial tracking module within the enterprise legal management product, functioning as a real-time legal financial ledger — enabling Citi Bank to track reserve allocations set aside for legal liabilities, record settlement transactions, calculate running balances, and generate financial statements across active matters. Subsequently productized and rolled out across additional global banking clients
- **Productized Configuration Cloning Module:** Designed and built an enterprise admin feature in our enterprise legal management product for Citi Bank that automates cloning of entire organizational unit setups — role-based security groups, data mappings, conditional UI rules, and access controls — reducing manual configuration of 100+ units from hours to a single-click async workflow. The feature was adopted into the core product and sold as a commercial module to additional enterprise clients

AI

- **Enterprise MCP Server (240+ Tools):** Designed and built a large-scale Model Context Protocol server with 240+ tools and a custom AI Agent tools orchestrator, enabling AI-agent development workflows across databases, codebases, REST APIs, DevOps pipelines, monitoring systems, and product knowledge bases, successfully integrated Confluence, Bitbucket, Jira, Jenkins and Azure into the MCP server — reducing manual analysis, design, development, deployment, testing and maintenance effort by 80%
- **Agentic AI Test Automation System:** Engineered a fully automated Agentic AI system that performs end-to-end product validation, autonomously generates and executes 20,000+ test scenarios, and produces validation reports using Agent Skills and sub-agents— cutting manual QA effort by over 60%
- **DataPrivacyShield Middleware:** Designed & implemented a security middleware layer for the MCP server that tokenizes and masks PII data before it reaches LLMs, enabling secure AI without exposing sensitive customer data
- **Custom AI Knowledge Retrieval System:** Built a high-accuracy, domain-specific RAG pipeline over multi-GB datasets and source code, backed by a vector database for semantic indexing and retrieval — enabling precise product-level knowledge extraction, contextual search, and AI-assisted reasoning at scale
- **MCP Server on Microsoft Azure:** Architected MCP server hosting and deployment on Azure, covering scalability, security, authentication, and session management strategies
- **Custom IntelliJ IDEA Plugin:** Designed and developed a custom IntelliJ IDEA Ultimate plugin to enable product development directly within the IDE, reducing dependency on separate web-based application
- **GitHub Copilot (Expert):** Advanced expertise in GitHub Copilot LLM models, custom Agents, SpecKit, MCP architecture, Knowledge extraction, search indexing and AI tool orchestration for real-world enterprise products

CAPGEMINI TECHNOLOGY SERVICES

FLEET & TELEMATICS

- **OneApp — Real-Time GPS & Maps Integration:** Developed a live GPS tracking module within the Java microservices platform by integrating the Google Maps API with real-time telemetry data streams from the connected fleet devices — enabling dynamic vehicle location visualization, live route tracking, and GPS-based fleet monitoring across the entire PENSKE network in the German market

TECHNICAL SKILLS

Programming Languages: Java (v11+), Groovy, JavaScript, SQL, Python

Frameworks: Spring Boot Application, JPA, Microservices, RESTful API, Maven, JUnit 4/5, Mockito, PowerMockito

Frontend: Angular (v8+), Bootstrap, HTML5, CSS3, TypeScript

Cloud & DevOps: AWS, Azure, PCF (Pivotal Cloud Foundry), Jenkins, CI/CD Pipelines, Docker, Kubernetes, Kafka

AI & Automation: Model Context Protocol (MCP), GitHub Copilot, Claude Code, Agentic AI, Custom AI Agents, Agent Skills, Instructions, Hooks, Sessions, Contexts, Tokenization and Speckit, LLM, Prompt Engineering, AI Workflow Orchestration, ChatGPT, OpenAI Codex

Databases: MySQL, MS-SQL

Tools & Platforms: VS Code, IntelliJ IDEA Ultimate, Postman, MySQL Workbench, DBeaver, MS SQL Server Management Studio, Git, GitHub Desktop, Bitbucket, JIRA, Confluence, Bamboo, Swagger

Practices: Agile, Scrum, TDD, SDLC, Code Reviews, REST API Design, Microservices Architecture, DSA, OOP

EDUCATION

B. Tech – Information Technology | Jeppiaar SRR Engineering College, Chennai | 2020 | CGPA: 7.34
